

Project CY 8609

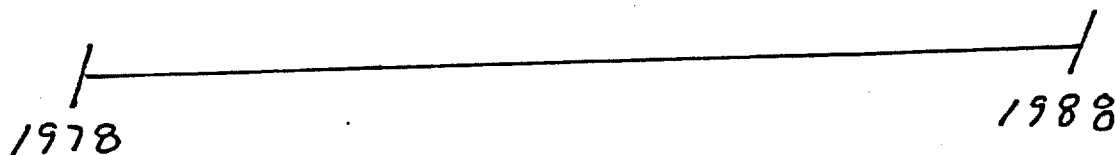

3k

1. Describe the Technical Facility located near:

SG1A

2. Within the following ten year period determine if and when any "special events" occur:

Note: If you do find any "special events" - - - subsequent sessions will be focused on each separate "special event."

shaped

mass

shaped

y down  
haze

Contained

Spaltung

S<sup>4</sup>/<sub>2</sub> shape of mass is important. Must be 'faceted' at specific angle + specific shaped/sized planes to function as desired.

S<sup>4</sup>/<sub>2</sub> mass is fixed in space;

using  
high tensile  
steel brackets

S<sup>4</sup>/<sub>2</sub> something dangerous to human physical well being about the Spaltung process, & therefore is contained inside protective structuring.

Radiation  
Heat  
involved  
released

S<sup>4</sup>/<sub>2</sub> mass is inside hollow space - i.e. nothing else needs be in immediate vicinity, indeed would "get in the way."

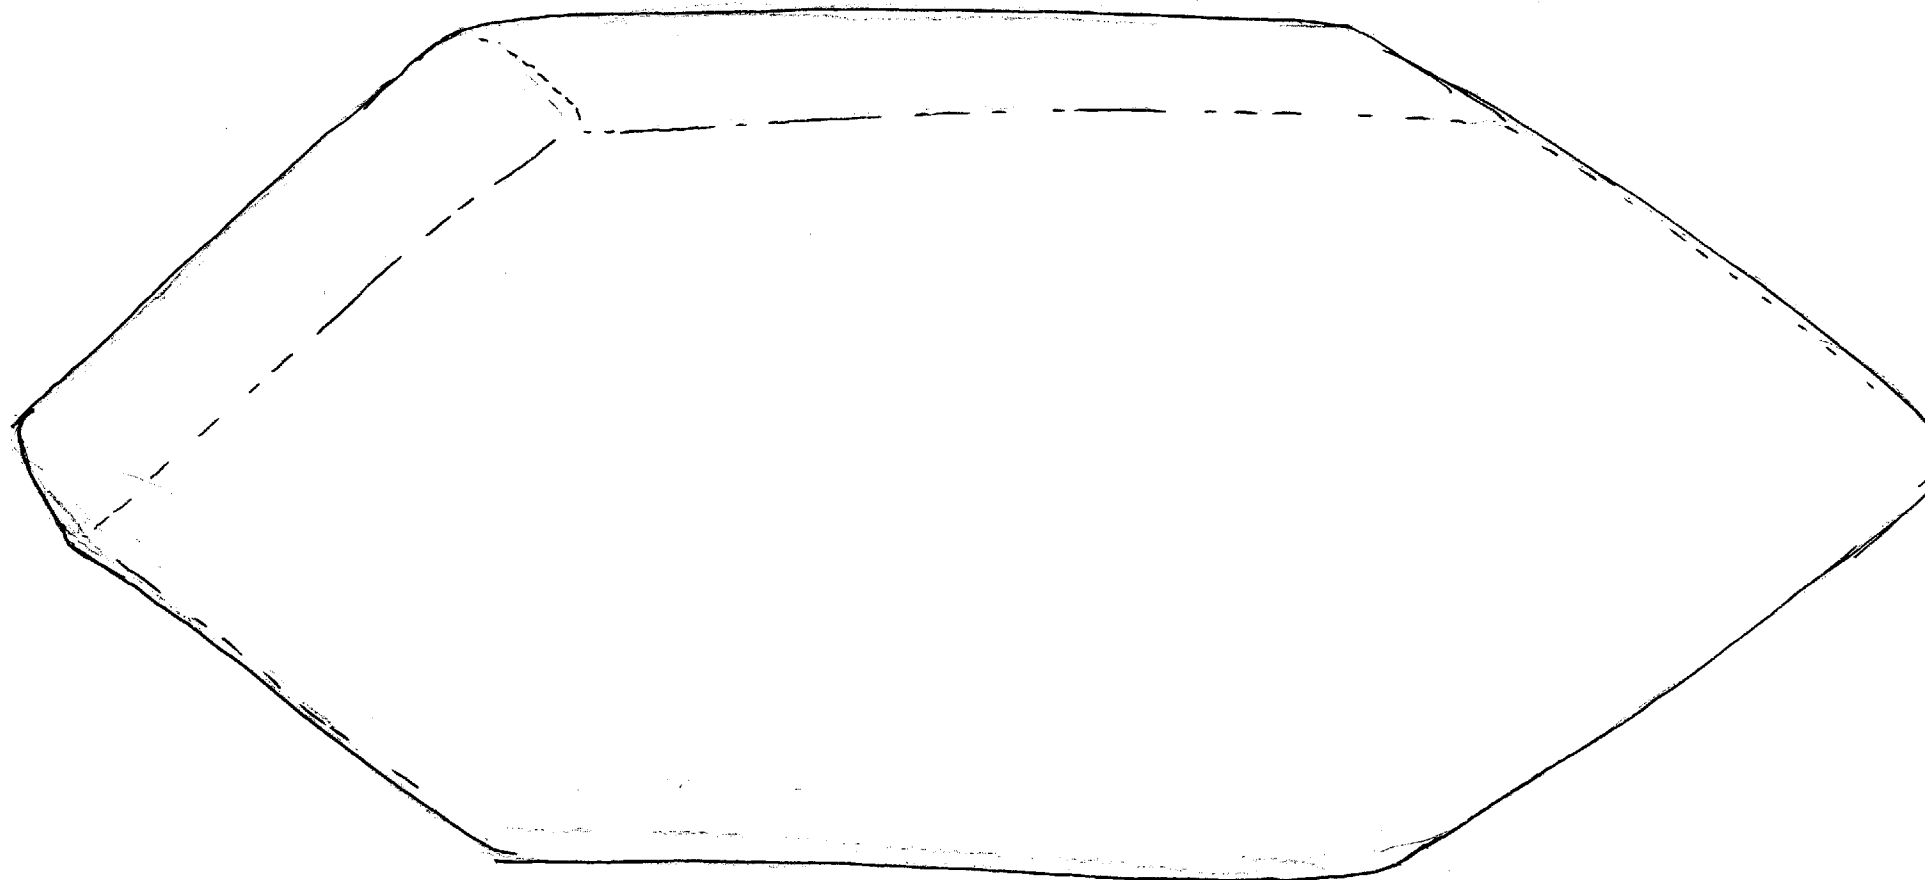

At Bk  
being worn  
it is physical  
- is unsettling,  
threatening

5 1/2 at point "chuckle" parts w/force - sharp-sudden, rapid event. "like" mass is loaded more + more with some sort of stress/energy/force until a threshold is reached for the disintegrating of the smaller piece or pieces - can't be predicted which part a piece will be first to go, so equipment design is such that any "piece" can go & still accomplish desired effect. Mass is "degraded" or somehow no longer adequate to be used further after this point & must be replaced with a fresh "mass" to continue. Old "mass" may possibly be regenerated/recycled/reprocessed by being reduced from precise shape, then reprocessed to be used again (i.e. "crushed", mixed w/ fresh material, then reconstituted + formed).

chamber

like an  
autoclave

5 1/2 in travel, "chuckle" is controlled, changes direction smoothly, ie going around curve.

dark grey

texture "like" a very fine grained whetstone or  
gridstone  
very hard & heavy for its size
